NEWFOUNDLAND FOREST RESEARCH CENTRE

The Newfoundland Forest Research Centre (NeFRC) is an establishment of the Canadian Forestry Service, Environment Canada. The Research Centre conducts most of the forestry research in the Newfoundland Region and is one of six similar regional establishments in Canada.

The objective of NeFRC is to provide the scientific, technological and economic information and services required for the improvement, protection, and efficient utilization of the forest resources of the Province of Newfoundland and Labrador. Its work is directed towards satisfying the requirements of the Provincial Government, the forest industry, federal agencies having forestry related programs and other clients of the Canadian Forestry Service; many of its studies are undertaken jointly with client agencies. The Research Centre attempts to bring the results of research to potential users by publishing information reports, articles in scientific journals, and by demonstrations of research results. It seeks to keep the public informed of its work by means of special displays, seminars, and related activities.

The NeFRC program has three principal components - Forest Resources and Environmental Research, Forest Protection Research, and Forestry Development.

ABSTRACT

During the summer of 1982, a survey was conducted of wood-working businesses in Newfoundland and Labrador. Information on business ownership, wood inputs, manufactured products, markets and employment is presented. All data are for 1981.

RÉSUMÉ

Au cours de l'été 1982, une étude a été faite sur l'industrie du bois travaillé à Terre-Neuve et au Labrador. Les renseignements ont été recueillis sur la propriété des entreprises, la consommation du bois, les produits manufacturés et l'emploi. Toutes les données sont pour 1981.

FOREWORD

This directory presents information on individual firms engaged in the secondary processing of wood products in Newfoundland. The information was collected through a survey of woodworking plants in 1982. This directory has been compiled for the use of both local and foreign companies involved in various areas of the woodworking industry. Also, the directory will provide increased exposure of Newfoundland's woodworking plants and their products to the marketplace. This directory is published in conjunction with a second report titled "The economic impact of the woodworking industry in Newfoundland, 1981"[1] which outlines the major economic impacts of the industry.

The authors thank the individual firms for their cooperation during the 1982 survey. This directory and the associated economic impact report could not have been completed without the information supplied by these firms. As well, the authors wish to thank Mr. Don Doull, Provincial Department of Development, and Mr. E.J. Hodder, Federal Business and Development Bank, for their advice and assistance during the course of the study. Also, thanks are offered to Mrs. D. Didham of the Newfoundland Forest Research Centre for typing the manuscript.

A DIRECTORY OF WOODWORKING INDUSTRIES IN NEWFOUNDLAND 1981

by

K.G. Mallay and G.R. Milne

INTRODUCTION

In the summer of 1982 a survey was conducted across Newfoundland & Labrador of the woodworking industry. The survey was designed to collect recent and accurate statistics on the state of the industry in the province.

Because of the wide variety of products within the industry, seven specific areas of manufacturing have been identified as follows; cabinets, windows and doors, caskets, toys, ships and boats, furniture, roof and floor trusses, and mobile trailers.

Information was collected on plant ownership, wood supply, source, type and quantity of wood used, production and employment, markets, condition of equipment, operating costs and industry revenue. All data were for the 1981 calendar year. Highlights for the woodworking industry in 1981 include 609 full and part-time employees, accounting for 521 person/years employment. The industry's value of shipments for 1981 was over $33.7 million. Nearly 28,000 m^3 of lumber were used at a value of $5.6 million, while 791 m^3 of panel products were used valued at $896,000. The total expenditures for the industry on capital and operational items, including wood inputs, were approximately $14.3 million in 1981.

As a result of the survey data and information gained through talking with woodworkers, it was felt that a directory such as this would be a useful publication for aiding the development of the industry.

During the survey period, May 1982 to August 1982, some businesses were closed due to the recession or for other reasons. Every possible effort was made to include all woodworking plants in Newfoundland into the survey. Any omissions should therefore be brought to the authors' attention for inclusion in future publications.

USING THE DIRECTORY

This directory has been designed to provide quick reference of woodworking plants by name or by product depending on the user's requirements.

To locate companies manufacturing certain products, refer to the table of contents. This provides immediate access to the appropriate section of the directory. A map has been placed at the beginning of each section and indicates the communities in which those products are manufactured. If, however, a specific company is required, then locate the name in the index at the back of this directory and refer to the page number listed for complete business information. This index also includes the location of each business in the province. One should note that the employment data given for each plant does not include the owner/manager, but rather represents hired help only. For markets, "local" refers to an area within 50 kilometres of the plant. Under wood supply, "imported" indicates fibre which has been imported from outside Newfoundland. The symbol N/A indicates that data were unavailable during the survey.

SYMBOLS

M	...	thousands
MM	...	millions
fbm	...	foot board measurement
N/A	...	not available
Local	...	area within 30 miles of the woodworking plant

CONVERSION FACTORS AND METRIC UNITS

Imperial	Metric (SI)
1 cord (85 ft^3 solid wood)	2.407 $metre^3$
1 cunit (100 ft^3)	2.832 m^3 (roundwood)
1 cord (stacked) per acre	8.956 m^3 (stacked)/ha
1000 bd ft	4.29 m^3 (roundwood)
1 ft^2 of sheet product (1/2" basis)	1.189 m^2 (1 mm basis)
1 ft^2 of sheet product (1/16" basis)	0.147 m^2 (1 mm basis)

CONVERSION FACTORS FOR TIMBER PRODUCTS

These factors are approximate values and may vary depending upon tree size, manufacturing practice, species, etc.

1 cunit (100 ft^3) = 600 fbm (roundwood)
1 bundle (50 pieces) of lath = 9 fbm
